

HandPunch biometric readers.

**Take control of time and attendance,
and keep your costs in check.**

From the Department of Streets and Sanitation, to the mayor's office and the port authority, government organizations require a time and attendance solution that can easily handle multiple shift schedules and frequent staff changes. The Schlage HandPunch is a proven biometric solution for government organizations that can significantly reduce the number one expense to you, labor. The Schlage HandPunch can be installed at multiple building and field application locations, delivering the most accurate and reliable time and attendance tracking no matter how large or small the staff.

HandPunch biometric readers ensure accurate time and attendance.

HandPunch, the reliable biometric.

Biometrics identify people by a unique human characteristic, such as their voice, a fingerprint or elements of the eye. The Schlage HandPunch uses the size and shape of a user's hand to identify the employee. The HandPunch provides additional benefits over other biometric technologies by using hand geometry to increase reliability and reduce privacy concerns. When the HandPunch is deployed properly payback can be realized in fewer than nine months.

- HandPunch accurately identifies users even if their hands are wet, dirty or injured.
- Consistent, accurate results are ensured because the HandPunch adapts its biometric template for an individual user over time. This means that the HandPunch "learns" to change as the user changes.
- Easy-to-use terminals are implemented globally and have one of the largest installation bases, with over 300,000 installed.
- Antimicrobial coating on the device inhibits the growth and spread of microbes and lasts the life of the HandPunch.

Save time and money, while ensuring accurate payroll.

Using biometrics to automate collection of time and attendance data can reduce buddy punching – where one employee punches in for another – manual data review and correction time, and payroll error. HandPunch keeps costs under control.

- Employees can only punch in for themselves, ensuring accurate records of time and attendance.
- No need for costly badges and cards that can be lost or damaged.
- Increase productivity by eliminating the need to manually review and collect information.
- Average return on investment occurs within nine months or less.

"Having the HandPunch terminals, working in tandem with our time and attendance software, has made this aspect of my job much easier and less time consuming."

Sue Stacy,
Human Resources Director
Tahlequah, OK

A proven solution in government installations.

The Schlage HandPunch has improved payroll management and streamlined time and attendance systems for both large and small federal, state and city organizations across the country.
