

HandPunch biometric readers.

**Take control of time and attendance,
and keep your costs in check.**

In the hospitality industry, frequent staff changes and multiple shift schedules can make it challenging to maintain accurate time and attendance records. The Schlage HandPunch is a proven biometric solution for the hospitality industry that can significantly reduce their number one expense, labor. The Schlage HandPunch can be installed at multiple locations on the property, delivering the most accurate and reliable time and attendance tracking no matter how large or small your staff.

HandPunch biometric readers ensure accurate time and attendance.

HandPunch, the reliable biometric.

Biometrics identify people by a unique human characteristic, such as their voice, a fingerprint or elements of the eye. The Schlage HandPunch uses the size and shape of a user's hand to identify the employee. The HandPunch provides additional benefits over other biometric technologies by using hand geometry to increase reliability and reduce privacy concerns. When the HandPunch is deployed properly payback can be realized in fewer than nine months.

- HandPunch accurately identifies users even if their hands are wet, dirty or injured.
- Consistent, accurate results are ensured because the HandPunch adapts its biometric template for an individual user over time. This means that the HandPunch "learns" to change as the user changes.
- Easy-to-use terminals are implemented globally and have one of the largest installation bases, with over 300,000 installed.
- Antimicrobial coating on the device inhibits the growth and spread of microbes and lasts the life of the HandPunch.

Save time and money, while ensuring accurate payroll.

Using biometrics to automate collection of time and attendance data can reduce buddy punching – where one employee punches in for another - manual data review and correction time, and payroll error. HandPunch keeps costs under control.

- Employees can only punch in for themselves, ensuring accurate records of time and attendance.
- No need for costly badges and cards that can be lost or damaged.
- Increase productivity by eliminating the need to manually review and collect information.
- Average return on investment occurs within nine months or less.

"We are using the HandPunch for five different pay rates, but our possibilities are unlimited. Since employees can't lose or forget their hands, these biometric readers eliminate the need for employees to carry a badge, thus purging the problem of lost or forgotten badges. This saves us time and money."

Payroll Administrator,
Hilton Waterfront Beach Resort,
Huntington, CA
